# Short Selling Release Notes – August 2010

## 1. Timing

A  Short Selling release will be implemented in production on the weekend of  21 August 2010.

## 2. Register Changes

a)  Submitting Entities that do not have an ACN, ARBN, or BIC may register for a unique ASIC Identifier to use as their PartyID in the FIX Message.

b)  The client's Identifier will be included in all confirmation emails to them when they update their account.

## 3. FIX Message

a)  If the short position quantity value in tag 705 contains a decimal the message will be rejected and the client will receive a BusinessMessageReject that is the same as that used for submission of a negative quantity (58=Invalid 705=value).

b)  BusinessMessageReject custom tag (tag 8901) that specifies a unique bundle identifier and is intended for use by those counter-parties (eg. Bloomberg) whose FIX application layer does not have access to session layer attributes (such as MsgSeqNum).
